#### 214.410 Accepted Tests for Speech-Language Therapy

1-1-13

Tests used must be norm-referenced, standardized, age appropriate and specific to the disorder being assessed. The following list of tests is not all-inclusive. When using a test that is not listed below, the provider must include an explanation and justification in the evaluation report to support the use of the chosen test. The *Mental Measurement Yearbook (MMY)* is the standard reference to determine the reliability and validity of the test(s) administered in the evaluation. Providers should refer to the *MMY* for additional information regarding specific tests. These definitions are applied to the following lists of accepted tests:

- STANDARDIZED: Tests that are used to determine the presence or absence of deficits; any
  diagnostic tool or procedure that has a standardized administration and scoring process and
  compares results to an appropriate normative sample.
- SUPPLEMENTAL: Tests and tools that are used to further document deficits and support standardized results; any non-diagnostic tool that is a screening, a criterion-referenced measure, descriptive in design, a structured probe or an accepted clinical analysis procedure (see next paragraph). Supplemental tests may not replace standardized tests. Exception: A tool(s) from a supplemental list may be used to guide data collection for the purpose of generating an in-depth, functional profile. See Section 214.400, part D, paragraph 8.
- CLINICAL ANALYSIS PROCEDURES: Specific analysis methods used for in-depth examination of clinical data obtained during assessment and used to further document deficits and support standardized results. Clinical analysis procedures may not replace standardized tests. Exception: Procedures from this list may be used to analyze data collected and assist in generating an in-depth, functional profile. (See Section 214.400, part D, paragraph 8.)
- CLINICAL OBSERVATIONS: Clinical observations have a supplemental role in the
  evaluation process and should always be included. They are especially important when
  standard scores do not accurately reflect a child's deficits in order to qualify the child for
  therapy. A detailed narrative or description of the child's communication behaviors (in-depth,
  functional profile) may constitute the primary justification of medical necessity.

#### • STANDARDIZED SCORING KEY:

Mild: Scores between 84-78; -1.0 standard deviation

Moderate: Scores between 77-71; -1.5 standard deviations

Severe: Scores between 70-64; -2.0 standard deviations

Profound: Scores of 63 or lower; -2.0+ standard deviations
